

Male Sterile BMR Forage Sorghum

Product Profile

This hybrid has exceptional sweetness and with it being Brown Midrib it is a cut above other Full Season forage sorghums.

The stems are larger than sorghum sudan hybrids, resulting in excellent resistance to lodging. It also retains its large dark green leaves throughout the growing season.

This hybrid is partially sterile, thereby not producing significant amounts of grain. This causes a substantial build up of non-structural carbohydrates in the stem and leaves. Consequently, the entire plant is more palatable to cattle.
